# TRISTAN PARTIN

# Software Engineer (Postgres Hacker) @ Neon

# **EXPERIENCE**

# Software Engineer (Postgres Hacker)

#### Neon

🗖 May 2023 – Present

◆ Austin, Texas (remote)

- Participating in upstream Postgres development.
- Migrating Postgres from a multi-process model to a multi-threaded model.
- Scaffolding out the final pieces of the Postgres Meson build.
- Adding support to Neon for new Postgres releases.

# **Staff Software Engineer**

## Micron Technology

□ August 2020 – February 2023

◆ Austin, Texas (hybrid)

- Maintained the Heterogeneous-Memory Storage Engine (HSE)
- Integrated HSE with MongoDB v3.4 as an alternative to WiredTiger
- Benchmarked HSE against popular storage engines like RocksDB and WiredTiger and found improvements in various workloads
- Designed Python and Java language bindings to wrap the HSE C API
- Co-authored a patent filing for a new on-media data structure

# **Software Developer**

### Expero

□ July 2019 – August 2020

♥ West Lake Hills, Texas

- Abstracted a collection of Java/TypeScript/Node.js microservices to be able to use both DataStax Enterprise and open source equivalents like JanusGraph, Cassandra, and Elasticsearch
- Developed a graph database benchmarking suite using CosmosDB, TigerGraph, DataStax Enterprise, and Neo4j
- Migrated data from a legacy FileMaker system to AWS RDS

#### Software Development Intern

# Expero

□ September 2017 – May 2019

**♥** College Station, Texas

- Designed a graph database modeling course curriculum
- Developed a daily time reporting tool for company leads to track developer time charges using AWS Lambda and Go
- Created a microservice using AWS S3 and Java that performs dynamic PDF generation
- Built a proof of concept ASP.NET Core application using Microsoft's CosmosDB Gremlin API

## Software Engineering Intern

#### NI (National Instruments)

□ May 2018 – August 2018

Austin, Texas

- Worked as a driver developer on the XNET team, which develops solutions for automotive testing
- Implemented time synchronization between data acquisition modules in order to better correlate collected data using C++ in both the Windows kernel and userspace drivers

# **EDUCATION**

# Bachelor of Science Computer Engineering

### **Texas A&M University**

**☎** May 2019

**♥** College Station, Texas

# **SKILLS**

# **PROJECTS**

# Heterogeneous-Memory Storage Engine

# O hse-project/hse

- A fast embeddable key-value store designed for SSDs and persistent memory, optimizing performance and endurance by orchestrating data placement across DRAM and multiple classes of solid-state storage
- Overcomes HDD-based architectures to improve throughput up to 6 times, latency up to 11 times and SSD endurance by 7 times when compared to Meta's RocksDB

# **HSE Python Bindings**

# O hse-project/hse-python

• Python language bindings for the HSE C API

# **HSE Java Bindings**

#### O hse-project/hse-java

• Java language bindings for the HSE C API

#### **Various Open-Source Contributions**

 Includes organizations and technologies like Meson, GNOME, Electron, Terraform, etc.

# **AWARDS/CERTS**

# Apache Cassandra 3.x Developer Associate

**♥ DataStax** □ 2020

#### **Eagle Scout Award**

**♥** Boy Scouts of America

□ 2014
